Info@yorkshireconservatoryinsulations.co.uk

The time to really incorporate your conservatory into a permanent living space **is here.**

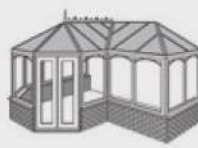

Victorian

Gable

Edwardian

P-Shaped

Lean-to Sun Lounge

Double Edwardian

Whatever Size or Shape.

After going to the time, trouble and cost of installing a beautiful conservatory, many customers have found that there are only a few months of the year that they are getting full use out of the conservatory with the other months sadly being either too HOT or too COLD!

Rising Energy Prices!

With the ever rising price of energy it can cost a staggering sum per month to keep your conservatory comfortably warm in the winter and air conditioning in summer would struggle to keep up with the rapid rises in temperature.

But... fear not!

With one of our incredibly insulated conservatory ceilings you can enjoy your home and garden including the conservatory, all the year round whatever the weather and kiss those extortionate fuel bills goodbye!

From Conservatory to Garden Room, Sun Room or Orangery

Once one of our stunning ceilings is installed you will find many uses for your room for all seasons because now it has suddenly become a genuine extension to your living area. For many customers it becomes their favourite room in the house and it gets more use than the lounge!

Imagine sitting comfortably in the conservatory in winter with the door to the rest of the house open so that you have an ambient temperature all through the house.

Complete Conservatory Conversions have transformed unusable conservatory areas into new dining rooms, TV rooms, playrooms, craft studios and sun lounges.

What Will You Use Yours For?

Let us create your **all season** additional living space for you.

Deal direct with the man who fits it, no pushy sales people, with no extra costs in commissions. **Need a survey? I will come to you.**

Already know your internal measurements? You can also fill in our online form on our website.

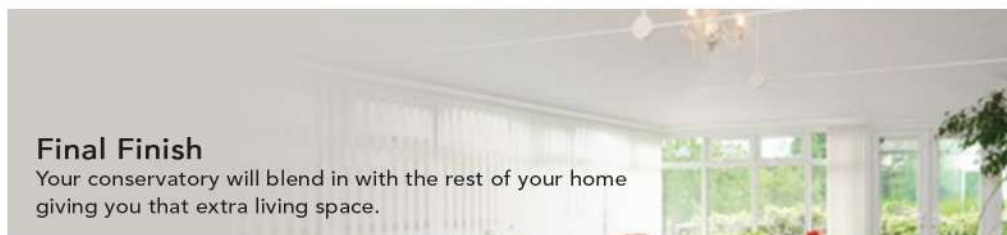

Before:
Pretty, but too cold in winter and not possible to see TV because of the glare in summer.

During:
Multi-layer ultra high insulation, boarded and plastered ceiling installed.

After:
We even clean your windows, wipe down all the sills and leave you with a useable space you can be proud of. Looking out onto your garden.

Final Finish
Your conservatory will blend in with the rest of your home giving you that extra living space.

CONSERVATORY INSULATIONS

And now for those all important technical details...

After all, there is no point in having a stunning conservatory ceiling if it is not going to insulate the roof to conform with building regulation's standards.

It's as simple as that!

SuperQuilt

Before -
Up to 90%
heat lost

After -
Only 10%
heat lost

Massive Thermal Insulation

Multi-layer blanket. Thin, flexible, multi-layer membrane for use in walls, floors and pitched roofs. Once installed, the new insulated ceiling drastically reduces the amount of heat escaping.

So what do we actually do?

Conservatories are not like other buildings, so it really won't do to treat them in the same way that you would any other building section of your home.

Conservatories are constantly on the move due to the rapid expansion and contraction caused by both interior and exterior temperature changes.

Condensation is a major factor which needs to be carefully considered and compensated for.

Fortunately, our installation process takes into account all of these factors. Even the materials that we use are time tested and proven suitable for conservatory use.

Your surveyor will explain thoroughly the different processes of an installation from start to finish and show you photos every step of the way on his ipad so that you can see exactly what we do.

Please rest assured that we only use the finest products and materials available with the highest proven performance data so that your new ceiling results in the lowest possible U values achievable.

The 19 multi-layer Superquilt not only reflects the infra-red radiation in the conservatory back into the room in winter instead of it sailing out through the roof like an invisible chimney but in the summer it acts as a very effective solar over-heating barrier preventing uncomfortable build up of heat in the home. It is also very lightweight at only 880g per m² so no need to worry about extra weight on the roof.

With our other layers of insulation incorporated into your insulated roof you can expect U values as low as 1.61 w/m²K.

Questions we get asked the most...

If there are any questions that you feel we have not covered, why not call us today to book a free no obligation survey. **Our surveyor will be happy to answer all of your questions fully at that time.**

Will there be any changes to the exterior of my conservatory?	No. We don't need to do anything to the exterior structure and the existing glass or polycarbonate conservatory roof will remain in place.
Will we lose any headroom in the conservatory?	Virtually none. We carefully follow the contours of your existing conservatory roof.
Will it change the look from outside of the conservatory?	No. Where necessary, semi- opaque film is applied to a glass roof but this is rarely necessary on a polycarbonate roof.
Do I need planning permission?	As the exterior of the conservatory is not being changed planning permission is not required.
Is this a messy job? Will you disrupt my house?	We have skilled teams of fitters and plasterers who will completely sheet and protect the work area. Then they will seal the work area from the rest of your home. At completion, they will leave your conservatory clean and tidy and remove all waste materials.
How long will it take to install?	Installations are usually completed within 1- 2 days but very large conservatories may take longer. We advise you of the actual time requirement prior to you placing your order.
Will we lose any light once the ceiling is fitted?	Covering a clear roof will of course reduce the amount of light entering the room but since the walls are virtually all glass, there will still be more than ample light. More importantly, the unpleasant glare factor will be eradicated. With a polycarbonate roof, the difference will be even less noticeable and in the evenings it will actually be lighter once painted white.
Will the shape of my conservatory roof change?	As stated above, very little will change. We always carefully follow the contours of your existing conservatory roof.
Will the installation cause condensation?	No. As part of the installation we install ventilation gaps above the insulation. The insulation barrier is then closed preventing condensation.

What makes us
different?

YORKSHIRE

CONSERVATORY INSULATIONS

We are a family business with over 30 years experience in the building industry, specialising in conservatory roof conversions since 2007. I doubt that there is a type or size of conservatory that we have not successfully made into a thermally efficient space.

When it comes to conservatory roof conversions we really do have the expertise to ensure a totally efficient installation to every type of conservatory. Different shaped roofs and different conservatory constructions require different installation methods, and that is where our wealth of experience really stands out.

Based in Yorkshire, we are able to offer a nationwide fitting service

**Exactly the same job for less,
by dealing direct**

Our family values remain at the heart of everything we do. All communication from our team will be conducted in a friendly, courteous and efficient manner. We don't use pressure selling tactics and won't try to sell something that isn't wanted or needed

**Did we also mention, we are very
competitively priced too!**
